PROFESSIONAL SUMMARY

Backend Software Engineer with 10 years building production-grade systems for **non-profits and associations** using C#/.NET and Azure. Delivered high-scale services (100K+ daily transactions) improving latency by 40%, and led a kiosk product cutting event check-in time by 70% with \$20K-\$30K savings per event. Strong end-to-end ownership across architecture, CI/CD, and audit-ready financial workflows.

EXPERIENCE

Software Engineer

enSYNC Corporation

Aug 2015 – Present

Fort Worth, TX

Cloud Architecture & System Design

- Architected distributed integration services processing 100K+ daily transactions, using ASP.NET Core, Azure Functions, and Node.js to decouple workflows and cut latency by 40%.
- Designed a high-throughput iMIS registrant API in .NET 8 with canonical record handling, reducing import failures and eliminating manual cleanup efforts.

Engineering Leadership & DevOps

- Spearheaded the CI/CD transformation across multi-client environments, implementing Azure DevOps pipelines that reduced release deployment times by 50%.
- Led the end-to-end delivery of “Kiosk Xpress,” a flagship event product for ****association conferences**** that cut attendee check-in times by 70% and generated cost savings of \$20K-\$30K per event.

Financial Systems & Core Product Development

- Engineered ACH and installment workflows with automated validation and settlement tracking to ensure audit-ready processing.
- Optimized recurring billing engines using C# and the Payflow Pro SDK, improving payment reliability and reducing manual reconciliation overhead.

SAP Basis Consultant

Larsen and Toubro Infotech

Aug 2011 – Aug 2013

Bengaluru, India

TECHNICAL PORTFOLIO & MACHINE LEARNING

Churn Prediction Microservice | *Python, Flask, Scikit-learn, REST API*

- Built a full-lifecycle machine learning pipeline to predict member retention, performing feature engineering and hyperparameter tuning to optimize model accuracy.
- Operationalized the model by wrapping it in a Flask REST API, enabling real-time consumption of predictions by internal dashboards.

Fantasy Premier League Data Pipeline | *Python, Pandas, Matplotlib*

- Engineered an end-to-end data ingestion pipeline that consumes FPL APIs to filter active players and clean historical datasets.
- Developed ranking algorithms and generated custom features to automate team selection decisions, using Pandas for high-volume data manipulation.

TECHNICAL SKILLS

Languages: C#, Python, JavaScript, SQL

Backend: ASP.NET Core (.NET 8), REST APIs, Entity Framework, Node.js

Cloud/DevOps: Azure Functions, Azure DevOps, Docker, CI/CD

Data & ML: SQL Server, Pandas, NumPy, Scikit-learn, Flask

Frontend: Angular, Bootstrap, jQuery

EDUCATION

The University of Texas at Arlington

Masters in Computer Science

Arlington, TX

Aug 2013 – May 2015

Visvesvaraya Technological University

Bachelors in Electronics and Communications

Bengaluru, India

Aug 2007 – May 2011
